Lineage

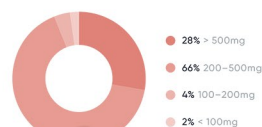

Strain type
Indica-dominant hybrid

Main terpenes

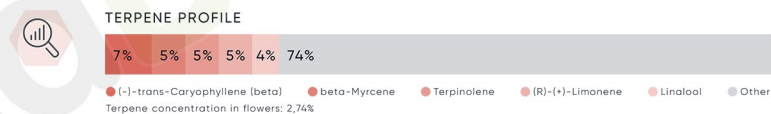

- (-)-TRANS-CARYOPHYLLENE (BETA) (BLACK PEPPER)
- BETA-MYRCENE (MANGO)
- TERPINOLENE (WOODY/HERBACEOUS)

Average bud size

ASPECT
Large triangular flowers, with some looking heart-shaped. The overall look is a mix of light green and orange due to the abundance of pistils.

MAIN AROMAS
Complex aroma that can be described upfront as sweet and creamy on a floral background. It may also carry subtle undertones of nuttiness or spice, contributing to its layered, inviting scent.

PESTS, DISEASES AND SEEDS
Besides the *ebeam treatment* that is performed to reduce the bioburden, our internal procedures ensure that there are no traces of pests, diseases, or seeds and flowers are clean and appealing to be released to the market.
