

OUR PRODUCT ISANDO TS

We currently offer two versions of our Isando Tokoloshe Sherbet (TS) - a 19% THC option, and a more potent 24% THC offering.

Isando TS is a truly balanced flower, laden with deep, rich aromas enhanced by a sweet, sugar candy terpene profile. With an alluring frosty and dense appearance, these flowers enchant your olfactory senses with their seductive sweet and creamy scents which are perfectly counterbalanced by subtle, natural undertones of sandalwood.

Neither products are irradiated, and both meet European Pharmacopoeia standards 5.1.4.

THC: 19%

THC: 24%

ISANDO TS HAS BEEN PRESCRIBED FOR:

Mood Elevation

Appetite Stimulation

Increased Concentration

Pain Relief

Improved Sleep

Improved Mental Health

Nausea Control

Anti-Inflammation

SCIENTIFICALLY GROWN MEDICINE

MedCan is a fully indoor medical cannabis cultivation company that is both GACP and GMP-certified. We provide consistent quality pharmaceutical-grade cannabis flowers that are high in THC and rich in other cannabinoids and terpenes. MedCan is the first South African company to be granted a licence to export high THC cannabis flowers commercially, and the first to export their product into the United Kingdom.

DEDICATED TO QUALITY AND CONSISTENCY

Medical cannabis offers phenomenal potential for treating an ever-widening range of medical conditions. But this new medical field must be built on consistency and transparency.

We recognise that serious medical research and treatment require a strictly scientific approach to the plant's cultivation and preparation that is both medically optimised and standardised. Guiding and driving MedCan is a formidable team of highly qualified and experienced people.

They ensure that we produce a consistent quality flower that meets the strictest international standards and is suitable for medical cannabis patients around the world.

Our purpose is to offer exceptionally high-quality medicine that can be accessed by those who will benefit most.

SCRUPULOUS QUALITY CONTROL

Each MedCan batch goes through rigorous tests and checks. The flowers are also tested in advanced independent laboratories, and a full certificate of analysis for each product is available on our website [medcan.co.za](https://www.medcan.co.za).

This is all to ensure that the most stringent legal regulations have been complied with, and that the flowers are free of harmful toxins, chemicals & microorganisms. We also validate that the active ingredients are present in sufficient strength and quantity for the prescribed medical treatment.
